Red Clovers

MEDIUM RED

737 Recommended as a winter and spring pasture Clover and soil improver on meadows. Some use it for hay, and yields 1 to 2 cuttings. In the states North of the Cotton Belt, Red Clover is sometimes a perennial, but as a rule it does not survive Southern summers. If fall sown it gets large enough to furnish fall grazing. Most soils suit this great soil-improving clover. Commence sowing during the early fall and spring at the rate of 12 to 15 lbs. per acre or in pasture mixtures with other crops, 5 lbs. per acre. Inoculate seed with NITRAGIN B. **Lb. \$1.00; 5 lbs. \$4.40.** Not prepaid: 10 lbs. \$6.50; 100 lbs. \$60.00.

LA. RED STATION 1

698 **Certified.** Louisiana Red Station 1 Clover is a new strain of Red clover that has just recently been released. Regular Louisiana Red Clover for the past several years has been in demand far in excess of the supply. This newer Louisiana Red Station 1 Clover is also in very short supply with very few acres planted for seed purposes this year. While this strain of Red clover matures later than other Southern strains, it is earlier than Kenland and other Midwestern varieties. For best results inoculate seed with Nitragin "B." **¼ lb. 50c; lb. \$1.30; 5 lbs. \$5.50.** Not prepaid: 10 lbs. \$8.50; 100 lbs. \$80.00.

American Rye Grass

840-A You should sow liberally of this famous quick hay and winter pasture grass. The seed cost is so reasonable. A bag (100 lbs.) will easily plant three acres. American Rye Grass is deep green in color and grows 2 to 3 feet tall. Provides continuous grazing from mid-winter until June. Furnishes rich and palatable feed and plenty of it. Sheep, cattle, hogs, horses and poultry relish it. It supplies proteins, minerals and vitamins so badly needed by growing stock. Stands a lot of pasturing and even when grazed to the ground makes rapid renewed growth as soon as given an opportunity. Little soil preparation is necessary. No plowing and covering is essential, as with oats and the like. Simply sow the seed and rake in. On compact soils loosen the ground with a rake or harrow, then sow the seed broadcast and lightly harrow in if convenient. In pasture mixtures it does well with Crimson Clover, Lespedeza, or other grasses and clovers. Best planting months are Sept., Oct. and Nov. Makes a better growth than most grasses on lands of low fertility.

Prices: Not prepaid: 10 lbs. \$1.45; 100 lbs. \$11.50; 500 lbs. \$56.75; 1,000 lbs. \$112.50.

Improved Louisiana White Clover

Louisiana S-1 WHITE CLOVER

700 Louisiana White Clover S1 (Certified) was bred as an improvement of the native White Clover. This improvement was demonstrated by comparison trials which showed S1 Clover as yielding an average of 7,531 pounds of hay per acre per year as to Louisiana White Clover's 5,919 pounds and Ladino Clover's 6,920 pounds. Some of this increase in forage may be attributed to the fact that S1 Clover begins growing earlier in the fall and continues later in summer. S1 Clover survived the drought during the 1952 summer and fall. Sow during the fall at the rate of 10 lbs. per acre when planted alone, or 4 to 6 lbs. on established pastures. Inoculate with Nitragin "B". ¼ lb. 75c; 1 lb. \$2.10; 5 lbs. \$9.00. Not prepaid: 10 lbs. \$16.00; 100 lbs. \$150.00.

700-A Louisiana White Clover S1 (Uncertified). ¼ lb. 70c; 1 lb. \$1.80; 5 lbs. \$7.50. Not prepaid: 10 lbs. \$13.00; 100 lbs. \$120.00.

Black Medic

742 A wonderful Clover of the Alfalfa family, thriving on all soils except loose sands and water-logged types. It spreads faster than any other Clover. Reseeds itself with the closest possible grazing. Yields a very nutritious pasture. Sow from early September until March, the earlier the better. It can also be used to excellent advantage for cover crop purposes. Matures seed in May. It works well in mixtures with other clovers and grasses for grazing. Sow 10-15 pounds an acre. Inoculate seed. Lb. 60c; 5 lbs. \$2.50. Write for prices on larger quantities.

California Hulled BUR CLOVER

740 (*Medicago hispida*). It adds nitrogen to the soil for the succeeding crops, adding vegetable matter, holding plant-food from washing away in winter rains and building up your livestock. California Hulled Bur Clover is superior to the common spotted variety. It's easier to obtain a stand, grows faster, often ready to graze by December 15, and withstands dry weather better. Stock relish it and it reseeds under the closest grazing. Simply broadcast the seed over the grazing area at the rate of 20 to 25 pounds to the acre. Seed should be inoculated with Nitragin A. Lb. 75c; 5 lbs. \$2.85. Not prepaid: 10 lbs. \$3.70; 100 lbs. \$34.00.

IMPROVED Louisiana WHITE CLOVER

722 This improved strain of Louisiana-grown White Dutch Clover grows much more vigorous and will last longer than the regular White Dutch during our hot Summer months. It starts out very early in the Fall and when properly fertilized makes an excellent Winter pasture. Two cuttings of hay may often be obtained. This clover came originally from New Zealand where it is also known as Mother Clover. Sow during the Fall at the rate of 10 lbs. per acre when planted alone, or 4 to 6 lbs. on established pastures. For maximum results inoculate seeds with Nitragin "B". ¼ lb. 60c; 1 lb. \$1.60; 5 lbs. \$7.00. Not prepaid: 10 lbs. \$12.00; 100 lbs. \$110.00.

WHITE DUTCH CLOVER

734 Louisiana-grown White Dutch Clover furnishes abundant grazing throughout the year under severe Southern conditions. The hottest dry summers do not stop its steady and sure growth. It has no equal for winter and early spring grazing. Louisiana grown seed produces a crop that blooms fully a month earlier than imported seed, growing several inches taller with leaves and stems twice as large. It is relished by all livestock. It is adapted in the South to practically every region and type of soil. It is a perennial. White Dutch Clover does well with Bermuda and Dallis Grass, as well as with Kentucky Blue Grass and Red Top in the upper South.

Sow during the fall and early spring at the rate of 10 lbs. per acre when planted alone. On established pastures, from 4 to 6 lbs. of seed per acre will give a good stand. Seed should be inoculated with NITRAGIN B. Lb. \$1.50; 5 lbs. \$6.50. Not prepaid: 10 lbs. \$10.50; 100 lbs. \$98.50.

RESEEDING CRIMSON Clover

703 (Certified) Gives great promise of being the South's No. 1 crop. It will reseed itself anywhere where the plants are allowed to mature seeds. It is the best annual Winter crop we know. It makes more growth during the Winter months than most other legumes. Furnishes excellent grazing from November to May and improves the soil fertility. Well drained sandy soils are preferable, but it has been grown successfully on almost all soil types of the South. Plant seeds on well prepared soil in drills at the rate of 10 to 15 lbs. per acre or 15 to 20 lbs. per acre broadcast, covering seeds lightly about ¼ to ½ inch by use of cultipacker or drag. May be grown with Oats, Lespedeza and grasses. For best results inoculate seed with Nitragin "B". Lb. 90c; 5 lbs. \$3.65. Not prepaid: 10 lbs. \$4.90; 100 lbs. \$45.00.

703-A Reseeding Crimson Clover (Affidavit furnished upon request.) Same as above. For best results inoculate seed with Nitragin "B". Lb. 85c; 5 lbs. \$3.40. Not prepaid: 10 lbs. \$4.40; 100 lbs. \$40.00.

CRIMSON CLOVER

739 A great annual winter soilbuilder and a quick grazing crop. Yields 8 to 10 tons of green feed per acre: 1½ to 2 tons of hay. Can be planted in corn and cotton fields from August to November, or combined with oats or other fall sown crops for spring pastures. Makes excellent quality hay if cut before maturity. Ready to graze by December. However, it is more often pastured in winter and plowed under as a green manure crop in the spring. Grows on poor soil if moisture is plentiful. Sow 15 to 20 lbs. per acre. Seed should be inoculated. Lb. 80c; 5 lbs. \$2.95. Not prepaid: 10 lbs. \$3.90; 100 lbs. \$36.00.

MARVELOUS MIXTURE

743A A combination of three of our most famous pasture clovers for the South—Persian, White Dutch and yellow Hop. A seeding that will last for years. Produces fine quality and variety of most excellent feed and gives longer pasture season. It only requires 6 pounds of seed to the acre. Lb. \$1.15; 5 lbs. \$5.00. Not prepaid: 10 lbs. \$8.00; 100 lbs. \$75.00.

HOP CLOVER

744 Grows well over the greater part of all the Southern States. It's very aggressive and hardy. Should be a part of all pasture Clover mixtures. It is one of the earliest to give grazing. Specially adapted to sandy soil and waste lands. When planted on rich soil, it will produce larger plants with more foliage. If used alone, sow 6 pounds per acre. Plant in early fall and spring. Makes slow growth through the winter, but comes on rapidly in the early spring. Seed should be inoculated with NITRAGIN B. Lb. 85c; 5 lbs. \$3.50. Write for Prices on Larger Quantities.

Hop Clover

For Better Pastures

Ladino Clover

WHITE BLOSSOM SWEET CLOVER

735 (Melilotus alba). A biennial Sweet Clover. Grows two years from one seeding. It's a great soil builder. Relished by all kinds of livestock. No other pasture crop measures up to the summer and fall grazing furnished by this plant. Here in the South two cuttings of hay are had the first year, and one cutting and a seed crop the second or grazing entirely, if preferable. Plant during September and October, at the rate of 15 to 20 pounds per acre, if sown alone. Seed should be inoculated with Nitragin A. Lb. **65c**; 5 lbs. **\$2.35**. Not prepaid: 10 lbs. \$2.70; 100 lbs. \$24.00.

ALSIKE CLOVER

736 This is the best pasture Clover for low, wet, or poor lands. On the borders of marshes, seepy hillsides, and places too wet for other Clovers this plant makes its best growth. It is of no value on dry soils. Sow with Red-Top grass on the damp and low places in the pasture. Commence sowing during September, at the rate of 6 to 8 pounds per acre. Seed should be inoculated with NITRAGIN B to insure success. Lb. **90c**; 5 lbs. **\$3.75**. Not prepaid: 10 lbs. \$5.20; 100 lbs. \$48.00.

HUBAM CLOVER

721 An annual White Blossom Sweet Clover resembling the biennial white (Melilotus Alba) in appearance. From a slow start it will reach a growth of 7 to 8 feet in a few months. Excellent pasture and hay clover. Also fine for bee keepers. Will reseed itself. Seed should be inoculated with Nitragin A and the soil well limed for best results. Sow 15 pounds to the acre. Lb. **55c**; 5 lbs. **\$2.00**. Not prepaid: 10 lbs. \$2.15; 100 lbs. \$18.50.

Persian Clover

LADINO Clover

720 Certified. Similar in appearance and habit of growth to the common White Dutch Clover, but a much stronger and taller grower. It is excellent for hay, very rich in protein and is relished by all kinds of livestock. Also fine for pasture and if not grazed too closely will remain green until Fall. Sow 2 to 3 lbs. to the acre if planted with grasses, 5 to 6 lbs. if sown alone. Lb. **\$1.15**; 5 lbs. **\$5.00**. Not prepaid: 10 lbs. \$8.00; 100 lbs. \$75.00.

MELILOTUS INDICA

738 Annual Yellow Blossom Sweet Clover. Also spoken of as "Sour Clover." Grows 2 to 3 feet tall and produces 5 to 10 tons of green matter by early May. Stock seem to relish it when the taste is cultivated, but it is chiefly used for soil improvement. It thrives on all kinds of soil—does splendidly on acid soils if they are limed. Tremendously reduces your fertilizer costs. Sow during the fall at the rate of 20 pounds to the acre if alone. Inoculate seed with Nitragin A. Lb. **45c**; 5 lbs. **\$1.25**. Not prepaid: 10 lbs. \$1.40; 100 lbs. \$10.75; 500 lbs. \$53.25; 1000 lbs. \$105.00.

KENLAND RED Clover

699 Certified Kenland Red Clover was bred particularly for its disease resistance. Highly tolerant to cold winters and summer droughts, it is a variety well worth sowing.

Kenland produces more root and nodule growth than the regular Red clover and as a result adds that much additional nitrogen to the acre.

Sow at the rate of 10 to 15 lbs. to the acre in the early fall, or 7 to 10 lbs. in mixtures. Inoculate seed with Nitragin "B" for best results. Lb. **\$1.10**; 5 lbs. **\$4.65**. Not prepaid: 10 lbs. \$7.00; 100 lbs. \$65.00.

Alsike Clover

PERSIAN Clover

743 A valuable clover that should be planted on every pasture in the South. Furnishes splendid grazing from December until June. Will carry 4 to 6 head of cattle per acre throughout the entire growing season. Yields 2 to 3 tons of rich, palatable hay per acre. Reseeds itself even when closely grazed and spreads rapidly. Makes an upright growth, 2 to 3 feet high, bears small pink flowers and seeds heavily. Will stand heavier, wetter lands than most clovers and is an excellent soil builder.

Persian Clover grows well in mixtures, and is an ideal crop to grow in connection with White Dutch, Bermuda, Dallis Grass, also Lespedeza for both hay and pasture. It has a deeper root system than White Dutch and requires less moisture for its success. Grows equally well on clay or loamy soils. The lime requirements are very low. Thrives on upland soils. Grows rapidly—fully two weeks ahead of White Dutch. Sow 6 to 8 pounds of seed per acre from September to November. Cover very lightly. Seed should be inoculated with NITRAGIN B. Lb. **\$1.15**; 5 lbs. **\$4.70**. Not prepaid: 10 lbs. \$7.20; 100 lbs. \$67.00.

ALFALFA *for* WINTER PASTURES & HAY

Pasture Showing Good Management

HAIRY PERUVIAN ALFALFA

702 Superior to all types for production where the temperature does not fall below 10 degrees Fahrenheit. Highly recommended for the entire lower South. Yields 10 to 20 per cent more growth during the Winter and can be cut through the entire year for hay. It is a tall, vigorous grower, and will live as long as any type where the Winters are not too cold and where there is Summer moisture. Yields one more cutting and from one to three tons more hay in a season than other Alfalfa. On poor or sandy land, Hairy Peruvian will give you cuttings of hay where other kinds will not. Sow during early Fall and Spring in thoroughly prepared, well-drained soil, broadcast or in drills, at the rate of 15 to 20 pounds per acre. Alfalfa will produce more good feed per acre, add more vegetable matter and nitrogen to the soil than any other crop. Seed should be inoculated. Lb. 80c; 5 lbs. \$3.00. Not prepaid: 10 lbs. \$3.70; 100 lbs. \$34.00. Write for quantity prices when ready to buy.

PEERLESS BRAND ALFALFA

701 Arizona-grown. Perfectly adapted to almost the entire upper South. Customers tell us that it will yield more than Utah and Kansas seed. Peerless Brand has the hardiness and yielding quality you demand in Alfalfa. Where it is planted on good, well-drained soil, with some lime, it will last almost indefinitely and cold does not kill it after it becomes well established. Lb. 80c; 5 lbs. \$3.00. Not prepaid: 10 lbs. \$3.70; 100 lbs. \$34.00.

Greatest

FERTILIZER CROPS *for the* SOUTH

Hairy Vetch

741 Ranks at the top as the champion soil-improving crop. Turned under at the proper time it will double and triple per acre yields of the following crop. Cut or grazed, combined with small grains, such as oats and rye, or seeded alone, it furnishes splendid winter and spring pastures. Makes wonderful hay, very rich in protein; all stock relish it.

\$19.75
Per 100 Lbs.

Sow during August through November at the rate of 20 pounds per acre in drills or 30 pounds broadcast. The three-row drill is well adapted for planting between cotton and corn rows.

When Vetch produces 15 to 20 lbs. of green matter per 100 square feet, the crop may be turned under. This is usually during early April. It will decay sufficiently in about two weeks to plant your corn or cotton, or some other summer crop. Seed should be inoculated.

Prices: Not prepaid: 10 lbs. \$2.30; 100 lbs. \$19.75. Write for prices on larger quantities.

Hairy Vetch

Common Vetch

725 The most popular type in Louisiana. The State Experiment Station claims that Common Vetch can satisfactorily be grown in most areas where Hairy is generally grown. Common Vetch prefers sandy loams that are well drained, but will produce good crops on most other soils where water does not stand. It is not as resistant to cold as Hairy. When planted alone, it requires 30 to 40 lbs. per acre. Half the quantity is sufficient when sown with small grains. Seed should be inoculated with Nitragin C. Not prepaid: 10 lbs. \$1.75; 100 lbs. \$14.50. Write for prices on larger quantities.

Atlas 66 Wheat

780 This wheat is noted for its excellent straw strength. It is resistant to powdery mildew and to both leaf and stem rust. Because of its ability to resist lodging, it can be used to better advantage for planting on soils of high fertility. Atlas shows a semi-winter habit of growth and a very dark green foliage. Sow during the months of September, October and November. If planted in drills 40 to 50 lbs. per acre is required, and if broadcast 75 to 90 lbs. per acre is recommended. Not prepaid: Pk. (15 lbs.) \$1.50; Bus. (60 lbs.) \$4.60; Bag (120 lbs.) \$8.50.

Dwarf Essex RAPE

876 Every hog-grower can produce pork at a lower cost if he has a good Rape-pasture. Relished by all kinds of stock, but principally planted for hogs and poultry. Make fine "greens" for table as a substitute for turnip or spinach "greens," when young. It grows 15 to 30 inches high and makes a splendid green and forage crop in 6 to 8 weeks. Grows on any soil. Sow any time during the summer, fall, or winter, either in drills (4 pounds per acre) or broadcast (8 pounds per acre). Planted in small grain, will pasture 20 hogs for 3 months. Lb. 55c; 2 lbs. 90c; 5 lbs. \$1.85. Not prepaid: 10 lbs. \$1.95; 100 lbs. \$16.50.

ABRUZZI RYE

776 Far ahead of any other Rye for the South because it gives a better yield, stands up well and produces good grazing. Our pure Southern-grown stock stools out quickly and heavily, covering the ground and protecting its roots in winter. It can be pastured a month to six weeks earlier than other types. Invaluable for the dairyman and stock farmer because it produces 50 per cent more pasturage. We offer only the highest quality stock. (Treat before planting with Ceresan M.) Not prepaid: Pk. (14 lbs.) \$1.60; bus. (56 lbs.) \$4.60; 2 bus. or more \$4.25 per bus. Write for quantity prices when ready to buy.

PENSACOLA BAHIA GRASS

Photo by Ed Hunton, USDA Extension Service

843 This grass for grazing is as good as any of the improved grasses if grazed while young or kept heavily grazed. It stands more cold weather and more dry weather than any of the other Summer grasses. Hot weather, cold weather, dry weather, rich land, eroded land, clay or sand—Pensacola Bahia will thrive and grow. Relatively unknown 5 years ago, it is fast becoming one of the South's leading grasses. Pensacola Bahia is a narrow leaf Bahia Grass (*Paspalum notatum*) that has a heavy, deep, fibrous root system. It has been grown successfully in combination with Clover, Lespedeza and Fescue Grass. Plant at the rate of 10 to 20 lbs. per acre. **Lb. 75c; 5 lbs. \$2.80. Not prepaid: 10 lbs. \$3.55; 100 lbs. \$32.50.**

RHODES GRASS

844 A valuable pasture and hay grass for South Texas. Yields 6 to 8 cuttings of rich hay, each averaging 1 to 1½ tons per acre. Does not stand severe freezing. Thrives best on soils that are fairly moist. It is very leafy, slender and erect, producing stems from 2 to 5 feet in height. The hay is easily cured. Broadcast seed any time during the early spring on well prepared land at the rate of 12 lbs. per acre. Cultural leaflet free! Very scarce. **Lb. \$1.60; 5 lbs. \$7.00. Not prepaid: 10 lbs. \$12.00; 100 lbs. \$110.00.**

RESCUE GRASS

842 (Chapel Hill Strain) Makes fine early spring pasture. Grows in tufts or bunches, often a foot in diameter and is very leafy at the base. The stems are nearly erect, 2 to 4 feet high. Furnishes nutritious grazing until May. Does well mixed with Rye Grass and Crimson Clover at the rate of 30 to 40 lbs. per acre. **Lb. 60c; 5 lbs. \$2.35. Not prepaid: 10 lbs. \$2.50; 100 lbs. \$21.00.**

Rescue Grass, Chapel Hill Strain

Fancy BERMUDA Grass

829 The most dependable and permanent Grass for lawns, golf-courses, and athletic fields. Stands long, hot, dry summers without injury. It grows on all kinds, from heaviest clay to the lightest sand, and furnishes abundant pasturage. Sow broadcast on well-prepared land from March until October in lower South. May to September in upper South and cover very lightly. Seed germinates slowly. Sow 10 to 15 pounds to the acre for pastures; 5 lbs. to 1,000 square feet for lawns. Germinates in 20 to 30 days with proper soil moisture. **Lb. 70c; 5 lbs. \$2.75. Not prepaid: 10 lbs. \$3.25; 100 lbs. \$29.50.**

Hulled BERMUDA Grass

826 Reuter offers Extra Hulled Bermuda Grass with the hull removed, a process which gives much quicker germination. Under favorable moisture and soil conditions, Reuter's Hulled Bermuda Grass will germinate in 7 to 10 days, whereas unhulled seed requires 20 to 30 days. Furthermore, it is more economical, because only about half the quantity is necessary to sow 100 square feet of lawn.

Seed should be sown from March until November in the lower South and from May until September in the upper South. Plant 3 lbs. to each 1,000 (50x20) sq. ft. of lawn, fairway, athletic or aviation field. Use 10 lbs. per acre for pasture. Plant when ground is warm because Bermuda will not germinate in cold soil. Be sure to specify **HULLED SEED** when ordering. **Lb. 90c; 5 lbs. \$3.65. Not prepaid: 10 lbs. \$5.00; 100 lbs. \$46.00.**

Imported DALLIS Grass

834 (Paspalum Dilatatum.) One of the most valuable permanent pasture grasses in the South. Comes nearer growing year-round than any other grass. Cultivation readily kills it. Makes its fastest growth on heavy or moist bottomland, but gives satisfactory results on dry hill lands, and will even grow in burnt-over timber land. It stops washes and gullies. Withstands continued drought remarkably well. We know of no better grass to withstand flood conditions on lowlands. Light freezes do not injure this grass.

Combines well with Bermuda and Carpet Grasses, and once started in mixtures keeps a satisfactory balance with other crops. Lespedeza grows well with Dallis Grass mixtures, also White Dutch, Alsike, Hop, Bur, Black Medic and Persian Clover. Plantings are made the year-round, but principally in late summer and early fall, and in the spring commencing in January. Broadcast 10 to 15 lbs. per acre if sown alone.

834 Imported Seed. (50% or better pure live seed.) **Lb. \$1.25; 5 lbs. \$5.50. Not prepaid: 10 lbs. \$8.50; 100 lbs. \$80.00.**

KENTUCKY 31 FESCUE

CARPET GRASS

823 (Certified) Kentucky 31 is a perennial bunch grass similar to Orchard Grass but with more of a spreading habit of growth. Unlike Orchard Grass the bunches increase in size and it eventually makes a close tight sod. It puts up blades in great numbers with possibly the greatest rate of growth in the late Summer, Fall and Winter when it stays noticeably greener than other perennials. It is best suited for use as a permanent pasture grass since it improves with age. It will grow almost anywhere but the better the soil, the better the grass. It is particularly suited to wet ground and will survive water standing on it for weeks at a time. It also grows well on high ground and stands drought well. A well prepared seed bed is advised but not absolutely necessary. Sow between Mid-August to Mid-October. Plant 10 to 20 pounds to the acre depending on whether a dense sod is desired or not. Grows well with Ladino Clover. Lb. 65c; 5 lbs. \$2.30. Not prepaid: 10 lbs. \$2.55; 100 lbs. \$22.50.

823-A Uncertified (98/90) Lb. 60c; 5 lbs. \$2.20. Not prepaid: 10 lbs. \$2.35; 100 lbs. \$20.50.

Carpet Grass in Luxuriant Growth

Kentucky Blue Grass

836 Excellent lawn grass; ideal for golf fairways and putting-greens; the sweetest and best pasture grass. Plants slightly creeping with deep green narrow leaf blades. It is only adapted to parts of the upper South and Northward. 5 pounds will sow 1,000 square feet for lawns; 40 pounds per acre for pasture. Plant in the fall and early spring. Lb. \$1.35; 5 lbs. \$5.75. Not prepaid: 10 lbs. \$9.00; 100 lbs. \$85.00.

RED TOP Grass

833 Good for lawns and pastures. Stands wet weather and overflowing for even two to three weeks. Will hold well during the summer if cut often. Sow from October until April at the rate of 5 pounds per 1,000 square feet for lawns and 10 to 15 pounds per acre for pastures. Cover seed very lightly. Lb. \$1.30; 5 lbs. \$5.25. Not prepaid: 10 lbs. \$8.25; 100 lbs. \$77.50.

Buffel Grass

830 Carpet Grass is one of the most important and valuable permanent grazing grasses for the South. A perennial spreading by creeping stems which root at every joint, thus forming a close, compact turf. Compared with Bermuda Grass, Carpet Grass is its equal in feeding value; it may be grazed considerably later in the fall and earlier in the spring; it does better on poor, sandy soils and furnishes more grazing; it is better adapted to wet sour soils and thrives better under hot, humid conditions. Like Bermuda it is palatable and relished by all livestock.

It is strictly a pasture or lawn grass and stands close grazing and heavy trampling; in fact, it grows best and spreads more rapidly when closely grazed and trampling seems to improve it. Can be sown over your present pasture, creek bottom, or cut-over woodland without plowing or discing. Produces practically year-round succulent green pasture. Easily eradicated by plowing. It does splendidly sown with Lespedeza, Dallis Grass, Black Medic, White Clover and Bur Clover. Carpet Grass can be grown wherever the temperature does not fall below 10 degrees. Fall sowings are conducted during Sept., Oct. and Nov. It is a drought-resisting grass and furnishes fine grazing during long dry spells, when all other grasses are dead. Carpet Grass is easy to start, if you plant first quality seed. Most of the seeds on the market are low grade. Reuter's stock is the finest available from the choicest meadows in the South. Sow at the rate of 10 to 15 lbs. per acre for pasture and 25 to 30 lbs. for lawns, public parks and golf courses. Lb. 75c; 5 lbs. \$2.80. Not prepaid: 10 lbs. \$3.50; 100 lbs. \$32.00.

PANIC GRASS

845 Giant Blue Panicum is a marvel among pasture grasses. It is a deep-rooted perennial bunch grass that forms good sized, tough crowns by means of thick, short, bulbous rhizomes. The plants may reach a height of six feet under the best of growing conditions. The bottom half of the stem has large nodes and body internodes. Branching from the lower nodes is common if the main stem is cut off. The panicles are terminal on the stems and branches. It doesn't make much growth for the first several months during which time it is building a root system. After it gets the roots well established it grows amazingly fast and is resistant to drought. It prefers heavy loam soils of high fertility and needs irrigation if annual rainfall is under 25 inches.

Panicum is a sweet grass used for hay and pasture. It is rich in protein and food value and yields per acre more than double that of Alfalfa. CAULIFLOWER

CAULIFLOWER, Master Original

Our cauliflower seed is grown for us by the foremost American and European specialists and we believe our strains are equal, if not superior, to any stock being offered, regardless of price.

Culture. Requires rich soil and abundant moisture. The only significant difference in the culture of Cauliflower and that of cabbage is that with Cauliflower the heads must be protected from sunlight to insure the much desired white curd. This is most readily accomplished by gathering the leaves together loosely, when the heads begin to form, and tying them at the top. One ounce will produce 2000 strong plants; ½ pound sufficient for an acre.

150 MASTER ORIGINAL

★ Brings Top Prices

★ Excellent for Market ★ Good Shipper

Pkt. 30c; ¼ oz. 80c; ½ oz. \$1.45; oz. \$2.60; ¼ lb. \$8.25; lb. \$29.50.

The compact heads make a beautiful appearance on any market and always sell for the highest prices. Pkt. 25c; ¼ oz. 65c; ½ oz. \$1.10; oz. \$1.90; ¼ lb. \$5.25; lb. \$17.50.

149 STELLA NOVA

This Danish developed strain is early maturing, being ready for market before the Snowball. The snow-white heads are of medium size, solid and very uniform. The foliage is of medium height. The early maturing habit of the Stella Nova makes it particularly valuable for a first crop. Also excellent for a late quick-growing crop. Extend your cauliflower season by planting a few rows of Stella Nova for early maturing. Pkt. 25c; ¼ oz. 75c; ½ oz. \$1.25; oz. \$2.35; ¼ lb. \$7.00; lb. \$25.00.

Crisp Delicious LETTUCE

With the discovery of its valuable health-giving vitamins, Lettuce has become a year-round table necessity. It is so easily grown that no garden need be without a generous supply.

Culture: Lettuce requires a rich soil, plenty of moisture, and a quick, steady growth from the time seeds are planted, until the heads are ready for use. The most common causes of failure to get Lettuce to head properly are too late planting and not giving the plants sufficient room for developing. Lettuce seed is difficult to germinate in hot weather. We suggest the seed be first soaked in ice-water for an hour, then wrapped in dampened paper or cheese-cloth and placed in the refrigerator for 10 to 12 hours prior to planting. Spread seed out on dry paper in shade and dry slightly. Immediately broadcast on good moist seed-bed, or sow 8 to 10 inches apart in rows 15 to 18 inches apart, covering with less than ½ inch of fine soil. One ounce will sow 150 feet of row; 2 to 3 pounds an acre.

Reuter's Famous ONIONS

Red Creole Onion

Culture. A good, well-drained soil, reasonably fertile, will give the best crops. September and October are the principal planting months. Sow in seed-beds and when 5 to 7 inches high transplant in rows 12 to 15 inches apart and 3 to 4 inches apart in the row. In some sections the seed is sown directly in the field in rows 18 to 20 inches apart. Cultivate every 10 days to keep down weeds and conserve soil-moisture.

Onions should be pulled when the tops in the field have fallen over and dried considerably. Allow them to dry on the ground and then place in shallow racks with slat bottoms which permit free circulation of air. When fully dried the tops may be wrung off and the Onions graded. Normal yields between 100 and 400 bushels per acre. One ounce plants 200 feet of row; 3 to 4 pounds, an acre.

25 bulbs will be charged at the 100 rate.

BUY REUTER'S HIGH QUALITY CHICKS WITH UTMOST CONFIDENCE

Every bird in every flock of breeder stock is Pullorum Tested to ZERO—which means there are NO REACTORS left in any of the flock from which ALL of Reuter's High-Quality Chicks are produced.

What does this mean? Answer—greater livability. Chicks hatched from healthy pullorum-typhoid flocks live—and pay—and while we do not make any livability guarantee—other than 100% live arrival—it is not the exception but the usual that our customers report from 90 to 100 per cent livability—substantiated by letters in our files. WHEN BUYING CHICKS DEMAND QUALITY—DON'T SETTLE FOR LESS. Cheap chicks never pay—we don't sell them. We do sell High-quality Chicks BECAUSE THE PARENTAGE BEHIND THEM IS THE BEST. Our AAA Grade Chicks are equal to most other 4A Chick offerings—our 4A Royal ROP Sired CHICKS are truly half pedigreed on the male side—and are OUR BEST.

Quality Seed Oats

Camellia Oats FOR DEPENDABLE RESULTS

778 (Certified) Developed by the Louisiana Agricultural Experiment Station and released in 1942. This strain of Oats is the result of years of selection and testing. It has shown almost complete resistance to leaf rust—a particularly important factor in South Louisiana where leaf rust epidemics in many parishes have made oats a hazardous crop. It is not resistant to stem rust but this disease is less prevailing and also less serious since it does not become severe until the plants are practically mature. The Camellia Oat produces strong, vigorous plants reaching up to 4 feet in height, and have large plump kernels with an insignificant awn. The large dark green leaves furnish a dependable winter grazing crop. It is a heavy yielder and returns of 65 bushels per acre are reported from South Louisiana. Not prepaid: Bus. (32 lbs.) \$2.50; 4 bus. or over \$2.15 per bus.; 48 bus. or over \$2.10 per bus. Write for quantity prices when ready to buy.

778-A (Uncertified). Not prepaid. Bus. (32 lbs.) \$2.35; 4 bus. or over \$2.00 per bus.; 48 bus. or over \$1.95 per bus. Write for quantity prices.

RED RUST Resistant

777 Nortex 107. Exceptionally fine strain of rust-resistant Oats that is hardy, heavy-yielding, producing a medium tall, stiff straw and an enormous tonnage of grain and hay. It is a very vigorous grower, robust, productive and does well on all types of soil. Sow during October and November at the rate of 2 to 3 bushels per acre. Cut for hay when the Oats are in the milk, or about half mature. Oats are easier to grow than corn, cost less to make and are a better feed in summer for your stock, being less heating. Stools out strongly and makes the best kind of grazing for cattle, hogs, horses and mules during the winter and early spring.

Many dairymen are using oats for early fall grazing and have found that in most cases milk production has been greatly increased.

Our seed is thoroughly re-cleaned. Not prepaid: Bus. (32 lbs.) \$2.00; 4 bus. or over \$1.65 per bus.; 48 bus. or over \$1.60 per bus. Write for quantity prices when ready to buy.

ALBER

770 This Oat is recommended as a most dependable producer. It matures fully ten days earlier than Red Rust Resistant varieties. Stools equally as well, withstands more adverse weather, just before harvest time. Yields 25 to 40 bushels more grain per acre. Definitely more rust-resistant than any of the so-called "rust-proof" strains. In one parish in Louisiana where Oat production had been a total failure, the famous Alber Oats yielded an average of 60 bushels to the acre for three consecutive years.

This wonderful Oat has been tested by the Experiment Station at Baton Rouge, and for six consecutive years it has been the highest yielding variety and a grand feeding Oat. Good land is necessary and the use of Nitrate as a top-dressing essential unless your soil is very rich. For hay, cut in milk stage; for grain, cut when fully ripe. Not prepaid: Bus. (32 lbs.) \$2.20; 4 bus. or more \$1.85 per bus.; 48 bus. or over \$1.80 per bus. Write for quantity prices when ready to buy.

CERESAN TREATED OATS INSURE SUCCESS

Treat your Oats with Ceresan M to insure against losses from smut and other diseases. Ceresan M is easy to apply, and destroys seed borne diseases either by direct contact with the spores or through vapor which penetrates every crack and cranny of the seed. $\frac{1}{2}$ oz. will treat one bushel of Oats. Ceresan M: 14 oz. \$1.70; 3 lbs. \$4.75, postpaid. Not prepaid: 40 lbs. \$44.95.

SOUTHLAND OATS

775 Southland Oats just recently developed by the North Florida Experiment Station, not only yields well but furnishes up to 20% more grazing than its closest competitor as it stools out heavily. It is resistant to Victoria blight and moderately resistant to crown rust. Although some yields have been as high as 70 bushels to the acre the average would be somewhat less. One of its assets is its ability to withstand lodging. Not prepaid: Bus. (32 lbs.) \$2.20; 4 bus. or more, \$1.85 per bus.; 48 bus. or more, \$1.80 per bus. Write for quantity prices when ready to buy.

ENRICH YOUR SOIL WITH... WINTER COVER CROPS

AUSTRIAN WINTER PEAS

809 One of the leading soil-builder and winter cover crops for the South because of its large, heavy growth on practically all soils and its ability to resist winter freezes. Makes a splendid temporary pasture during late winter. It grows about 5 feet high, can be planted by itself, but does fine with a light seeding of oats, rye or barley to hold vines off ground; makes a heavy tonnage of splendid hay. Protects your soil, holds and increases its fertility, furnishes grazing for your livestock, or makes valuable green manure, decaying rapidly when plowed under.

Sow Austrian Winter Peas during September through November, in drills at the rate of 30 lbs. per acre and cover 2 inches. Also sown broadcast and disked in. Turn under during late March or early April. Inoculate seed with NITRAGIN.

Prices: Not prepaid: 10 lbs. \$1.05; 100 lbs. \$7.45. Write for current market prices on larger quantities when ready to buy.

Singletary Peas The WONDER CROP

808 This Wild Winter Pea was discovered in Louisiana by Professor B. H. Singletary of the College of Agriculture, Louisiana State University. It is a valuable soil improving winter legume for Southern farmers and furnishes plenty of green matter for turning under. Singletary Peas save you money as they will reseed themselves, thereby eliminating the necessity of replanting every year. Will furnish excellent supplemental grazing when planted in combination with a small grain crop such as Oats. Grazing after seed pods mature will cause serious upset in digestion of cattle and horses. A seed crop of Singletary Peas is easily saved and will average 1,000 lbs. to the acre in good land under favorable weather conditions, with enough seed scattered to insure a stand the following winter. If planted alone 40 lbs. of seed is needed per acre, in Oats 20 to 30 lbs. will be sufficient. Plant preferably in drills 1 to 2 inches deep depending on soil types. Soil should be well drained. Singletary peas should be inoculated with Nitrigin "C." Neglect to do so may cause crop failure.

Prices: Lb. 35c; 5 lbs. \$1.20. Not prepaid: 10 lbs. \$1.50; 100 lbs. \$12.00.

Write for quantity prices when ready to buy.

Inoculate All LEGUMES

All legumes should be inoculated for best results. Field tests have shown that better crops are harvested when the seeds are inoculated and often the lack of proper inoculation means a failure. This applies to all Clovers, Alfalfa, Winter Peas and Vetches. Do not take any chances. The cost is small. When ordering be sure to state name of seed for which inoculation is to be used. See page 30 of catalog for prices.
